                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis infections Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXY subunit of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   265

The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis. Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         325

The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis is Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXX subunit of the invention.

Helicobacter bizzozeronii an ability to produce urease, where the nucleic acid molecule is a urease gene cluster comprising at least one urease accessory gene. The nucleic acid molecule is chosen from urea, ureB, ureB, ureG, ureH and ureI. The invention also relates to an isolated protein encoded by the nucleic acid, a vaccine for preventing onset of disease in mammals infected by H. bizzozeronii comprising a nucleic acid and a carrier, and an isolated cantibody or its binding portion raised against the nucleic acid. The nucleic acids, proteins and antibodies are useful for vaccinating mammals antibody or its binding portion raised against the nucleic acid. The involves administering the sequences. The sequences are useful for detecting H. bizzozeronii in a sample of tissue or body fluids which involves providing a nucleic acid as an antigen, providing an antibody, or providing an uncleoide sequence as a probe in a nucleic acid or providing an uncleoide sequence as a probe in a nucleic acid or providing an antibody, and detecting any reaction which indicates that H. bizzozeronii is present in the sample. This sequence represents the H. bizzozeronii
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2378
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel isolated nucleic acid molecule having urease gene cluster, and conferring on Helicobacter bizzozeronii ability to produce urease, useful as vaccine for preventing disease in mammals infected by H.bizzozeronii.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         242

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ATGTATGGTCCTACTACAGGCGATAAAGTGAGATTGGGCGATACAGACTTGATCGCTGAA 914
sequences coding for the urease A (AAW07193) and urease B (AAW07194) subunits of Helicobacter pylori clinical isolate CPM630. To obtain pORV214, a genomic DNA library of CPM630 was screened with anti-Helicobacter trasse antibody. A 17 kb S211 fragment from an isolated clone was subcloned into pUCI8 to give pSCP1. PCR primers (AAT44352-53) were used to amplify a 2.5 kb fragment from pSCP1, which was inserted into pGT24+ to give pORV214. The vector was utilised in the prodn. of recombinant, enzymatically inactive, multimeric urease in B. coli transformants for use in vaccines to treat or prevent Helicobacter infection. (Updated on 16-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                        The sequence encodes urease UreA and UreB proteins, which are components of a novel immunogenic composition capable of inducing protective antibodies against Helicobacter infection. The composition may include the UreA or UreB proteins, a urease-associated heat shock protein (AAR74338-39) or the UreI protein (AAR74340). The composition is used to prepare a vaccine for humans or animals, especially against H. pylori and H. felis. Antibodies against the proteins may be used for treating Helicobacter infection, and primers/probes to the DNA sequence may be used for detection of Helicobacter infection. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                Immunogenic composition against Helicobacter infection - also gene fragment(s) and protein(s) from Helicobacter wrease gene cluster and heat shock protein(s).

A portion (AAT45680) of plasmid pILL205 (CNCM I-1355) comprises the Helicobacter felis structural urease gene encoding urease subunits A (AAM06729) and B (AAM06730). pILL205 was obtd. by examining the expression of urease activity by H. felis cosmid clones and identification of the H. felis genes required for urease expression when cloned in B. coll. The urease gene can be used to design probes for the detection of Helicobacter infection, or utilised in the prodn. of recombinant urease subunits for use in novel immunogenic compsns. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CAACCAACCCGAAGCCATTGCTTACATTAGTGCCCATATTATGGACGAAGCGCGCCGTGG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to inducing an immune response against Helicobacter in a mammal, comprising mucosally administering to the mammal an attenuated Salmonella vector containing a nucleic acid molecule encoding a Helicobacter antigen, and parenterally administering to the mammal a Helicobacter antigen. Also included is an attenuated Salmonella vector comprising a nucleic acid molecule encoding a Helicobacter antigen. The Helicobacter antigen antenuated salmonella vector is a urease, a urease subunit, or its immunogenic fragment (encoded by the ureA and ureB genes). The mammal is at risk of                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Londono-Arcila P, Freeman                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Kleanthous H, infection. The attenuated Salmonella vector further comprises an htra or nirb promoter. The vector can be used in inducing an immune response against Helicobacter in a mammal. The vector can be used to treat Helicobacter infection. The vector and the method can be used to treat Helicobacter infection. The vector and the method can be used to treat Helicobacter infection. The vector and the method can be used to treat Helicobacter induced gastroduodenal diseases, including acute, chronic or atrophic gastricts, peptic ulcer diseases (e.g. gastric or duodenal closers), and gastric carcinoma. Attenuated Salmonella vector pHUR3 was constructed expressing Urea and Urea and including an B. coli AmpR gene. The present sequence represents the pHUR3 plasmid. NOTE: pHUR3 is represented by both ABES5112 and ABES5130, the peptides expressed by pHUR3 are shown in the sequence listing to be split between ABES5112 and ABES5130, the peptides being expressed by the one sequence, therefore all encoded peptides are cross-referenced to both sednences.

in a mammal, comprising microsally administering to the mammal an attenuated Salmonella vector containing a mucleic acid molecule encoding a Helicobacter antigen, and parenterally administering to the mammal and Helicobacter antigen. Also included is an attenuated Salmonella vector comprising a nucleic acid molecule encoding a Helicobacter antigen. The Helicobacter antigen is a urease, a urease subunit, or its immunogenic fragment (encoded by the urea, and urea genes). The mammal is at risk of having but does not have Helicobacter infection or has a Helicobacter or infection. The attenuated Salmonella vector further comprises an hirh or in a promoter. The vector can be used in inducing an immune response against Helicobacter in a mammal. The vector can be used to treat thelicobacter infection. The vector and the method can be used to treat Helicobacter infection. The vector and the method can be used to treat thelicobacter induced gastroducdenal diseases, including acute, chronic constructed expressing Urea and the method can be used to treat the present sequence represents the pHUR3 plasmid. NOTE: pHUR3 was constructed expressing Urea and Arbelland Salmonella vector pHUR3 and Salmonella vector pHUR3 are shown in the sequence listing to be split between ABB55112 and ABB5513. A BB55132 and Salmonella supprides being expressed by the one constructed to both the peptides are cross-referenced to both the construction and processed by the one construction and processed processed by the construction and processed processed processed by the construction and processed p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          268

                                                                                                                                                                                                                                                                                                                                                                                                                                                    The DNA is a 2.7 kb TaqI fragment encoding the A and B subunits of H. pylori (previously C. pylori) urease, i.e. the 66 and 31 kb antigens. From the sequence, probes and primers can be designed for the amplification (by PCR) of the gene, to produce a prods. common to all H. pylori strains so far tested and which do not occur in other ureases and can therefore be used as a specific indication of the presence of H. pylori. H. pylori (previously C. pylori) is strongly implicated in the pathogenesis of gastritis and duodenal and peptic ulceration in man. The primers probes can be used for the detection of H. pylori DNA in gastric mucosa, saliva or faecal samples to provide an early diagnosis of infection. See also AAQ12434-Q12486. arricural gene and at least one urease accessory gene. The nucleic acid molecule is chosen from urea, urease accessory gene. The nucleic acid molecule is chosen from urea, ureB, ureF, ureG, ureH and ureI. The invention also relates to an isolated protein encoded by the nucleic acid, a vaccine for preventing onset of disease in mammals infected by H. bizzozeronii comprising a nucleic acid and a carrier, and an isolated antibody or its binding portion raised against the nucleic acid. The nucleic acids, proteins and antibodies are useful for vaccinating mammals against onset of disease caused by infection of H. bizzozeronii, which involves administering the sequences. The sequences are useful for detecting H. bizzozeronii in a sample of tissue or body fluids which involves providing a nucleic acid as an antigen, providing an antibody, or providing a nucleic acid as an antigen, providing an antibody or providing an antibody or providing any reaction which indicates that H. bizzozeronii is present in the sample. This sequence represents H. bizzozeronii ureB DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           494
                                                                                                                                                                   This sequence encodes H. felis urease B. This sequence was used in the method of the invention for raising an immune response in an animal. The method comprises administering to the animal a composition comprising a carrier and an antigen bound to a targeting moiety which binds to at least one receptor present in circulatory vessels in Gut Associated Lymphoid Tissue (GALT). The method is useful for raising an immune response in an animal against antigens from Salmonella, Cholera, Helicobacter pylori, HIV, Candida, P. gingivalis, gut barasites, gut associated toxins, gut hormones, gut hormone receptors or gut associated cancers. The method is useful for raising both mucosal and systemic immunity against any antigen used in the composition

Sequence 19, Application US/08432697

Patent No. 6248330

GENERAL INFORMATION:
APPLICANT: Labigne, Agnes
APPLICANT: Sauerbaum, Sebastien
APPLICANT: Ferrero, Richard L.
APPLICANT: Thiberge, Jean-Michel
TITLE OF INVENTION: IMMUNOGENTICOMPOSITIONS AGAINST
TITLE OF INVENTION: POLYPEPTIDES
TITLE OF INVENTION: POLYPEPTIDES
NUMBER OF SEQUENCES: 44
CORRESPONDENCE ADDRESS:
ADDRESSEE: Finnegan, Henderson, Farabow, Garrett &
                                                                                                                                                      2168

Patent No. 6258359

GENERAL INFORMATION:

APPLICANT: Labigne, Agnes

APPLICANT: Sauerbaum, Sebastien

APPLICANT: Thiberge, Jean-Michel

TITLE OF INVENTION: HELICANCER INFECTION, POLYPEPTIDES FOR USE IN THE

TITLE OF INVENTION: COMPOSITIONS, AND NUCLEIC ACID SEQUENCES ENCODING SAID

TITLE OF INVENTION: POLYPEPTIDES

NUMBER OF SEQUENCES 44

CORRESPONDENCE ADDRESS:

ADDRESSEE: Finnegan, Henderson, Farabow, Garrett &

STREET: 1300 I Street, N.W.
